ADVANCED LIFTS

Lift Equipment Built for Millions of Cycles, Not Just Years of Service

Loading at the wrong height, moving product between mezzanine levels by hand, or tipping and rotating containers manually all cost time and invite injuries—lift equipment removes that friction at the exact point it happens.

Twinpick Racks partners with Advance Lifts to spec dock lifts, scissor lift tables, and mezzanine access lifts built for high-cycle industrial duty rather than light commercial use. Their tilters, upenders, container dumpers, and turntables handle the awkward material-handling moves that don't fit neatly into racking or conveyor—rotating, dumping, and repositioning loads so your team isn't doing it by hand.

What We Evaluate

- Load capacity, platform size, and daily cycle count
- Pit-mounted vs. portable, and available floor or dock space
- Travel height needed between levels, docks, or mezzanines
- Duty cycle and warranty class for high-volume operations
- Integration with existing dock equipment and mezzanine access
- Power, hydraulic, and maintenance access requirements

HOW A PROJECT COMES TOGETHER

From First Walkthrough to a Plan You Can Build

Lift equipment runs thousands of cycles a year in most facilities, so every project starts with real data on load, cycle rate, and dock or floor layout—not a generic unit.

1

Assess

Study load weights, cycle counts, travel heights, and site conditions to size the right lift for the job.

2

Design

Match dock lifts, scissor tables, tilters, dumpers, or turntables to your process and plan for pit, power, and access needs.

3

Implement

Coordinate delivery and installation with Advance Lifts, with testing before the unit carries live loads.
